

We Master Your Payments.

One cashier in front. One treasury behind. One integration.

Partnered with Mastercard Open Banking

aryze.io

What is in here.

Aryze is a payment infrastructure provider — Pay by Bank, crypto payments and FX through one integration. Anything marked live, you can test in a sandbox this week.

Deposits are lost at the cashier.

Not to broken technology. To friction, at the last step, after you already paid to bring the player there.

Won the player. Lost the deposit.

Marketing, bonuses and affiliates buy the visit. Whether the deposit lands is decided in the final thirty seconds — in the cashier. Declines and chargebacks come on top, and cost you separately.

Every failed payment is money already spent.

Affiliates, campaigns, paid traffic. It all lands in the cashier, and that is the one place still built on card forms.

Five problems. The ones that cost most.

There are more. These are the five that come up in every operator conversation we have.

Fees grow with the deposit

A 4% fee on a €1,000 deposit is €40. Your best players cost the most.

Chargebacks and declines

The worst chargeback exposure of any vertical, and limits keep tightening.

A rail goes down, cards pick up the bill

The usual fallback is cards, at card prices, on your worst day.

Too many providers

Every PSP adds a contract, an integration and a reconciliation by hand.

FX eats the margin

Money between markets moves through correspondents, at their spreads.

One integration. Every one of them gone.

PLAYER

ONE INTEGRATION

OPERATOR

*Payouts: in build — live next.

Two taps. Paid.

The deposit flow as it runs today, inside the player's own bank app.

The bank app they already trust

No card forms, nothing new to learn.

Nothing to type

No card numbers, no expiry dates, no card declines — and no PCI scope.

Verified in the flow

The same session confirms whose account it came from.

In the balance in seconds

Near-instant settlement, so the player plays on.

The rails behind the cashier.

One integration reaches the banks your players already use. Live in the UK and EU today.

2,900+

banks connected through
Mastercard Open Banking

16

markets live today, three more on the
roadmap

 Austria	94%	 Italy	96%
 Belgium	98%	 Latvia	98%
 Denmark	100%	 Lithuania	98%
 Estonia	95%	 Netherlands	97%
 Finland	98%	 Poland	96%
 France	93%	 Portugal	97%
 Germany	93%	 Spain	98%
 Ireland	96%	 UK	96%

ROADMAP

Hungary

Norway

Sweden

Bank account coverage published by Mastercard Open Banking.

Do the math.

Their fees are a percentage of every deposit. Ours is €0.50 per transaction, whatever the size.

THE EXAMPLE

1,000 deposits of €50 in a month

CARDS · 4 %

€2,000

A2A · 1.2 %

€600

Aryze · €0.50 FLAT

€500

YOUR NUMBERS

Deposits a month **1,000**

1000

Your card rate (high-risk) **4.0%**

40

Average deposit **€50**

50

Your percentage A2A rate **1.2%**

12

One **€50** deposit costs you **€2.00** with cards, **€0.60** with percentage A2A, and **€0.50** with us. Every time.

CARDS · MONTH

€2,000

A2A · MONTH

€600

Aryze · MONTH

€500

€1,500

back in your margin every month against cards.
€18,000 over a year on €50,000 of monthly deposit volume.

A percentage fee grows with the deposit; a flat fee grows only with your player count. Above a ~€42 average, flat beats a 1.2% rate — below it, we will tell you.

One call to the API.

Authenticate, initiate, receive the webhook. Our quickstart is timed at about five minutes.

```
# base url
https://payment-api.openfinance.aryze.io

# initiate a payment
curl -X POST /v1/payments/initiate \
  -H "Authorization: Bearer sk_live_..." \
  -d '{ "amount": 100.50, "currencyCode": "EUR" }'

# response
{ "flowUrl": "https://payment.aryze.io/...", "status":
"PENDING" }
```

Today, next, and the roadmap.

We would rather show a short list that is true than a long one that is not.

LIVE TODAY

testable this week

- Pay by Bank, live in the UK and EU
- Flat fee at €0.50, published
- No chargebacks on bank payments
- Near-instant settlement to your account
- Account verification in the flow
- Sandbox and API keys for your team

NEXT

in build, committed

- Payouts in seconds, same rails
- Crypto converted before it reaches you
- KYC packaged per licence

ROADMAP

the treasury layer

- One treasury view across brands
- FX between markets at internal rates
- New markets on the rails already there

One view. Every balance.

Every brand, market and currency in a single live view — instead of a stack of bank portals.

The treasury layer is roadmap. It gets built with the operators who join early.

What the money does next.

The half of the product that sits behind the cashier.

One view of every balance

Every brand, market and currency in the same live feed.

FX without the leak

Value moves between markets at internal rates, without the correspondent chain.

Crypto without the exposure

Crypto deposits land as euros in the same feed, before they reach you.

New market, nothing new to build

Entering a market stops meaning a new banking setup.

Every brand. One screen.

The treasury view as we are designing it, instead of a stack of bank portals.

One number, not nine

Month end in minutes

FX is a booking

Crypto in, euros out

Three brands, three markets.

What a multi-brand group looks like on the full platform.

RUNNING WITHOUT IT

- Four PSP contracts, four integrations
- Six bank accounts, three markets
- Reconciliation stitched by hand
- FX through correspondent banks
- No single view of cash
- New market, new banking setup

ON THE FULL PLATFORM

- One integration, every brand
- One balance per currency
- One reconciliation feed
- FX at internal rates between markets
- Every balance in one live view
- New market, same rails

The honest column.

Where we are live, where we are building, and where the others stop.

	Aryze	Trustly	Brite	Paysafe	Paxos
A2A pay-ins	●	●	●	●	
Flat fee, published	●				
Account verification in the flow	●	●	●		
Instant payouts	◐	●	●	●	
Crypto acceptance	◐			●	●
Treasury view	○				
FX between markets	○				

● live today ◐ in development ○ roadmap ● live with them

Trustly, Brite and Paysafe stop at the cashier. Paxos is settlement infrastructure and never reaches it. Nobody covers the whole column yet.

No minimums. The easiest yes in payments.

Most providers want a volume commitment before they quote you.
We publish the price and let you test first.

€0.50

flat per transaction. It does not grow with the deposit.

Zero

volume minimums, no lock-ins. Add us next to
what you run today.

Day one

sandbox on your own flows, nothing signed, nothing at
risk.
