

We Master Your Payments.

One cashier in front. One treasury behind. One integration.

Partnered with Mastercard Open Banking

aryze.io

What is in here.

Aryze is a payment infrastructure provider — Pay by Bank, crypto payments and FX through one integration. Everything marked live can be tested in a sandbox this week.

Deposits are lost at the cashier.

Not to broken technology, but to friction at the final step — after you have already paid to bring the player there.

Won the player. Lost the deposit.

Marketing, bonuses and affiliates pay for the visit. Whether the deposit lands is decided in the final thirty seconds, in the cashier.

Every failed payment is money already spent.

Affiliates, campaigns, paid traffic. It all lands in the cashier, and that is the one place still built on card forms.

Five problems. None of them are yours to fix.

They come with the rails you inherited, not with how you run the business.

Fees grow with the deposit

Your best player deposits €1,000 and €40 of it goes to the schemes.

Chargebacks and declines

You pay for the traffic, the bonus and the chargeback on the same player.

A rail goes down

Cards pick up the traffic on your worst night, at card prices.

Too many providers

Month end is four dashboards, four statements and one spreadsheet by hand.

FX eats the margin

Moving money between markets costs a day and a spread you never see.

One integration. Every one of them gone.

PLAYER

Pay by Bank

Crypto

DEPOSITS

PAYOUTS*

ONE INTEGRATION

Cashier

- Money in and money out through one API
- Account ownership verified in the flow
- Flat fee at any deposit size, one reconciliation feed

Treasury

- One view of every balance, across brands and currencies
- ReForge, our FX engine, converts at internal rates
- Crypto settled in your currency before it reaches you

SETTLEMENT

OPERATOR

All brands, one connection

One balance per currency

*Payouts: in build — live next.

Two taps. Paid.

The deposit flow as it runs today, inside the player's own bank app.

The bank app they already trust

No card forms, nothing new to learn.

Nothing to type

No card numbers, no expiry dates, no card declines — and no PCI scope.

Verified in the flow

The same session confirms who owns the paying account.

In the balance in seconds

Near-instant settlement, so the player plays on.

The rails behind the cashier.

One integration reaches the banks your players already use.
Live in the UK and EU today.

2,900+

banks connected through
Mastercard Open Banking

16

markets live today, three more on the
roadmap

 Austria	94%	 Italy	96%
 Belgium	98%	 Latvia	98%
 Denmark	100%	 Lithuania	98%

ROADMAP

Hungary

Norway

Sweden

Bank account coverage published by Mastercard Open Banking.

Do the math.

Their fees are a percentage of every deposit. Ours is €0.50 per transaction, whatever the size.

THE EXAMPLE

1,000 deposits of €50 in a month

CARDS • 4%

€2,000

A2A • 1.6%

€800

Aryze • €0.50 FLAT

€500

YOUR NUMBERS

Drag the sliders — the numbers update as you go.

Deposits a month **1,000**

Your card rate (high-risk) **4.0%**

Average deposit **€50**

Your percentage A2A rate **1.6%**

One **€50** deposit costs you **€2.00** with cards, **€0.80** with percentage A2A, and **€0.50** with us. Every time.

CARDS

€2,000

A2A %

€800

Aryze

€500

€1,500

back in your margin every month, compared with cards.
€18,000 over a year on €50,000 of monthly deposit volume.

One call to the API.

Authenticate, initiate, receive the webhook. Our quickstart is timed at about five minutes.

```
# base url
https://payment-api.openfinance.aryze.io

# initiate a payment
curl -X POST /v1/payments/initiate \
  -H "Authorization: Bearer sk_live_..." \
  -d '{ "amount": 100.50, "currencyCode": "EUR" }'

# response
{ "flowUrl": "https://payment.aryze.io/...", "status":
"PENDING" }
```

docs.aryze.io Every link opens the real documentation.

Today, next, and the roadmap.

We would rather show a short list that is true than a long one that is not.

LIVE TODAY

sandbox available today

- Pay by Bank, UK and EU
- Flat fee at €0.50, published
- No chargebacks
- Near-instant settlement
- Verification in the flow
- Sandbox and API keys

NEXT

in build

- Payouts in seconds
- Crypto converted to euros
- KYC packaged per licence

ROADMAP

the treasury layer

- One treasury view
- FX at internal rates
- New markets, same rails

Nothing is marked live until an operator can run it on real money.

One view. Every balance.

Every brand, market and currency in a single live view — instead of a stack of bank portals.

The treasury layer is roadmap. It gets built with the operators who join early.

What the money does next.

The half of the product that sits behind the cashier.

One view of every balance

Balances across brands and markets, updated as money moves.

FX without the leak

Value moves between markets at internal rates, without the correspondent chain.

Crypto without the exposure

Crypto deposits land as euros in the same feed, before they reach you.

New market, nothing new to build

Entering a market stops meaning a new banking setup.

Every brand. One screen.

The treasury view as we are designing it, instead of a stack of bank portals.

One number, not nine

Month end in minutes

FX is a booking

Crypto in, euros out

Three brands, three markets.

What a multi-brand group looks like on the full platform.

RUNNING WITHOUT IT

- Four PSP contracts, four integrations
- Six bank accounts, three markets
- Reconciliation stitched by hand
- FX through correspondent banks
- No single view of cash
- New market, new banking setup

ON THE FULL PLATFORM

- One integration, every brand
- One balance per currency
- One reconciliation feed
- FX at internal rates between markets
- Every balance in one live view
- New market, same rails

The honest column.

Where we are live, where we are building, and where the others stop.

	Aryze	Trustly	Brite	Paysafe	Paxos
A2A pay-ins	●	●	●	●	
Flat fee, published	●				
Account verification in the flow	●	●	●		
Instant payouts	◐	●	●	●	
Crypto acceptance	◐			●	●
Treasury view	○				
FX between markets	○				

● live today ◐ in development ○ roadmap ● live with them

Trustly, Brite and Paysafe stop at the cashier. Paxos is settlement infrastructure and never reaches it. Nobody covers the whole column yet.

No minimums. The easiest yes in payments.

Most providers want a volume commitment before they quote you.
We publish the price and let you test first.

€0.50

flat per transaction. It does not grow with the deposit.

Zero

volume minimums, no lock-ins. Add us next to
what you run today.

Day one

sandbox on your own flows, nothing signed, nothing at
risk.
